**Java**

```java
class Solution {
    public boolean validWordAbbreviation(String word, String abbr) {

    }
}
```
--------------------------------------------------------------------

**JavaScript**

```javascript
/**
 * @param {string} word
 * @param {string} abbr
 * @return {boolean}
 */
var validWordAbbreviation = function(word, abbr) {

};
```
--------------------------------------------------------------------

**C++**

```cpp
class Solution {
public:
    bool validWordAbbreviation(string word, string abbr) {

    }
};
```
--------------------------------------------------------------------

**C#**

```csharp
public class Solution {
    public bool ValidWordAbbreviation(string word, string abbr) {

    }
}
```
-------------------------------------------------------------------------
